

Problem Statement – CricZone

Kata Topic

CricZone solution

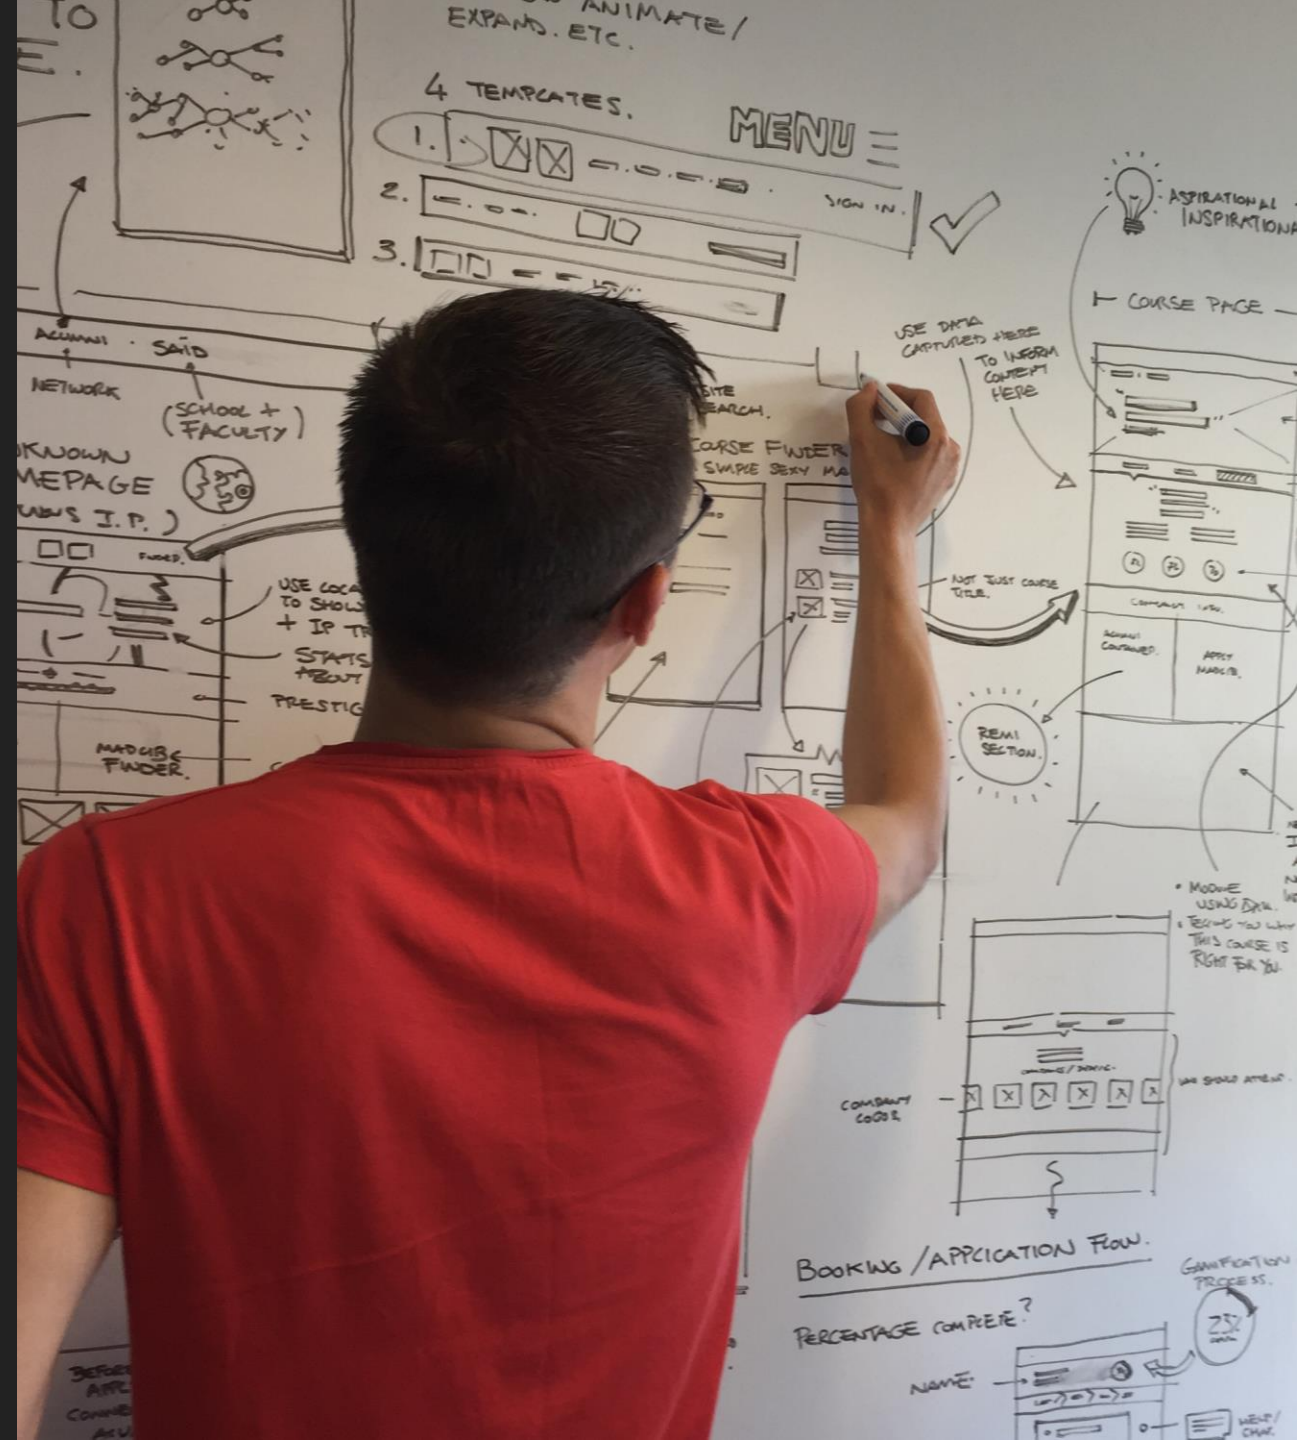

We are a startup Company seeking an application that seeking a platform that aims to bring organization and recognition to local cricket games by providing nearest Cricket stores, Offers, Sponsorship, real-time scoring, detailed player performance analytics, and tournaments. With a growing user base, the app must efficiently handle increasing data volumes, provide real-time updates, and maintain a seamless user experience.

Requirements

- **Tournament Creation and Management** : Facilitate organizers in setting up and managing local cricket tournaments, including team registrations, match scheduling, ground, and tournament management.
- **Store locator & Offer finders**: Facilitate organizers in setting up collaboration with cricket stores, provide offers on the app.
- **Live Scoring and Game Management**: Provides real-time updates to players and fans, enhancing engagement and ensuring that scores are accurately and efficiently recorded and disseminated.
- **Player Performance Tracking and Analytics**: Helps players understand their performance trends and areas for improvement, coaches to make informed decisions, and fans to follow their favorite players more closely.
- **Community Engagement and Social Features**: Builds a community around the sport, encouraging user retention, and increasing engagement through interactive social features.

<epam>

Requirements

- **Sponsorship Management:** Ensures the sustainability of the app by opening various revenue streams while providing value-added services to users and attractive opportunities for advertisers and sponsors. (**Monetization is out of scope**)
- Cost is a crucial consideration up until the point at which study income is generated.
- We welcome both cloud-based and off-cloud solutions.
- Initially targeting in metro cities (India) later across the country.
- Use the comprehensive data and statistics provided by the app for reporting and analysis in sports media.

Thank you!
